

Commercial HVAC System for Rooftop Installation

This HVAC system is designed for rooftop installation in commercial and industrial buildings. It provides climate control through a network of connected, insulated pipes and multiple identical units with high cooling capacity.

Overview

Commercial Rooftop HVAC Solution

This commercial HVAC system is engineered for large-scale rooftop installation, providing robust cooling capacity for industrial and commercial facilities. The modular design, featuring multiple interconnected units, allows for scalable performance to meet high-demand environmental control requirements. Designed for efficiency and reliability, this system utilizes a sophisticated piping network to ensure optimal heat dissipation and climate management across large building footprints.

Installation Details

Installation Type	Rooftop
System Configuration	Modular, Multi-unit, Chilled Water System

Performance Metrics

Capacity Status

High Capacity • Industrial Grade
