

Commercial Reverse Osmosis Water Filtration System

This reverse osmosis system provides purified water with a capacity of 400 gallons per day at 25 and 65 PSI. It requires a feed water pressure of 0.1 to 0.35Mpa and can handle feed water temperatures from 5 to 38 .

Overview

Commercial Reverse Osmosis System

This robust commercial Reverse Osmosis (RO) system is engineered to provide purified water in high-demand office and public environments. Featuring multiple filtration stages, it efficiently removes impurities and dissolved solids to ensure consistent, high-quality drinking water. The system is housed in a durable, lockable cabinet for security and ease of maintenance, making it a reliable solution for professional settings.
