

Commercial Vehicle Air Dryer Valve

This heavy-duty air dryer valve is designed for commercial vehicle braking systems. It removes moisture and contaminants from compressed air to prevent corrosion and maintain optimal brake performance.

Product Overview

Heavy-Duty Air Dryer Valve

This heavy-duty air dryer valve is engineered specifically for commercial vehicle braking systems. It is designed to efficiently remove moisture and contaminants from compressed air, which is critical for preventing internal corrosion and ensuring optimal brake performance. The unit features a robust construction for reliability in demanding environments and includes a spin-on desiccant cartridge to facilitate easy maintenance and extended service life.

Technical Features

Core Functions

- Moisture removal from compressed air
- Contaminant filtration
- Maintains consistent air pressure
- Protects downstream components from damage

Installation Design

Multiple ports, Spin-on desiccant cartridge, Heavy-duty construction

Compliance & Standards

Compliance

Industry Standard Compliant
