

# Compact Agricultural Tillage Machine

This tillage machine is designed to meet the evolving needs of modern agriculture. It features rotating tines for effective soil cultivation and adjustable handles for enhanced operator comfort.

## Product Overview

### Professional Soil Tillage Solution

This compact agricultural tillage machine is engineered for versatile soil preparation across various land types, including grains, vegetables, and orchard maintenance. It enhances soil structure by creating a loose, granular topsoil layer while ensuring the necessary soil density for healthy crop root development. Designed for efficiency and durability, this machine streamlines land mechanization processes for modern farming operations.

## Technical Capabilities

### Supported Attachments

- Plow
- Rotary tiller
- Disc soil tillage machinery
- Paddy harrow
- Straw chopper
- Cultivator

### Key Features

Adjustable handles, Robust frame, Soil loosening, Weed management, Compact design

## Application

### Primary Applications

- Pre-sowing soil preparation
- Vegetable crop cultivation
- Orchard and tree planting preparation
- Grass and forage land maintenance
