

# Compact CNC Lathe

This compact CNC lathe is designed for precision machining of small parts. Its enclosed work area enhances operator safety and contains chips.

## Overview

### Compact CNC Lathe (CK 6130)

The CK 6130 is a compact CNC lathe engineered for high-precision machining of small to medium-sized components. Featuring a fully enclosed work area, it prioritizes operator safety and effective chip containment during high-speed operations. This machine integrates a robust programmable control system and a dedicated coolant reservoir, making it an ideal solution for workshops requiring consistent accuracy and efficient production.

## Technical Specifications

### Machine Type

CNC Lathe • Compact

### Model Number

CK 6130

## Key Features

### Safety & Design

- Fully enclosed work area
- Integrated chip containment
- Sturdy base construction
- Programmable CNC control panel

### Auxiliary Systems

Coolant System, Tool Post, Workpiece Chuck
