

Compact Combine Harvester

This combine harvester is a compact and efficient machine designed for harvesting various crops. It features a robust cutting mechanism, a threshing system, and a cleaning system for optimal harvesting productivity.

Overview

Compact Harvesting Solution

The 4L-80A Combine Harvester is a high-efficiency agricultural machine engineered for versatility in various crop harvesting tasks. Featuring a robust cutting mechanism and an integrated threshing and cleaning system, it ensures high-quality grain separation with minimal loss. Its compact design offers superior maneuverability in smaller fields, while the powerful engine guarantees reliable performance across diverse field conditions.

Technical Specifications

Performance Metrics

80 A

Series Capacity

Model	4L-80A
Key Features	Compact Design, High Efficiency, Minimal Grain Loss, Easy Maintenance

System Capabilities

Integrated Systems

- Robust cutting mechanism
- Advanced threshing system
- Impurity cleaning system
- High-performance engine
