

Compact Cooling Fan for Electronic Devices

This compact cooling fan is designed for efficient heat dissipation in electronic devices and industrial applications. Optimized fan blades ensure high airflow and low noise operation within a durable plastic frame.

Product Overview

Compact Cooling Solution

This compact cooling fan is engineered for efficient heat dissipation within electronic devices and specialized industrial applications. Featuring a durable plastic frame and optimized blade design, it delivers high airflow while maintaining low noise output. The unit includes integrated mounting holes, making it an ideal choice for cooling systems where space is at a premium.

Physical Characteristics

Frame Material	Durable Plastic
Installation Type	Integrated mounting holes, Easy installation

Performance

Key Performance Attributes

- Optimized blade geometry for high airflow
- Low noise operation
- Compact design for tight enclosures

Application

Typical Applications

Electronic Devices • Industrial Applications • Tight Spaces
