

Compact Earthmoving Machine

This compact construction machine is designed for versatile earthmoving and material handling tasks. Equipped with a front-end loader bucket, this robust machine is suitable for excavation, grading, and demolition applications.

Product Overview

Versatile Earthmoving Performance

This compact construction machine is engineered for high-efficiency earthmoving and material handling tasks. Designed with a robust, reinforced frame, it excels in excavation, grading, and demolition applications. Its powerful engine and intuitive hydraulic controls ensure reliable, consistent performance even in the most demanding construction environments.

Key Features

Equipment Highlights

- Front-end loader bucket
- Reinforced frame construction
- Hydraulic control system
- Integrated operator safety features

Primary Applications

Excavation, Grading, Demolition, Material Handling

Performance Metrics

Operational Focus

1 Loader Bucket

Primary Attachment
