

Compact Electric Three-Wheeled Vehicle with Enclosed Cabin

This compact, three-wheeled vehicle is designed for urban transportation. It features a fully enclosed cabin, providing weather protection for the driver and passengers.

Overview

Compact Urban Mobility

The Tricar-3 is a specialized three-wheeled electric vehicle engineered for efficient urban navigation. Its fully enclosed cabin ensures occupant comfort and weather protection, making it a reliable solution for short-distance transport. With a stable tri-wheel configuration and integrated safety features, it provides a practical and eco-friendly alternative for congested city environments.
