Product Overview

Compact Excavator Efficiency

This compact excavator is designed for superior flexibility and maneuverability in confined spaces, making it an ideal solution for utility work and landscaping. Its agile design allows for efficient operation in pipeline laying for gas, water, power, and telecommunication industries. Additionally, it serves as a powerful tool for agricultural tasks, including orchard maintenance and irrigation channel excavation, significantly reducing manual labor costs.

Certifications & Compliance

Quality Certifications

CE • TUV • BS

Applications

Suitable Industries

Landscaping, Pipeline Laying, Orchard Management, Construction, Utility Work

Design & Performance

Key Operational Features

- Compact design for narrow space construction
- Flexible turning capability
- Robust track drive system
- Hydraulic control system for precision
- Includes heavy-duty toothed bucket
