

Compact Flour Milling Machine

This small flour mill machinery is a compact unit designed for low investment and high efficiency. It integrates pneumatic conveying, grinding, and sifting to produce high-quality flour.

Overview

Compact Flour Milling Solution

This small-scale flour milling unit is designed for continuous, high-efficiency grain processing with a low investment footprint. Engineered for simplicity, it offers straightforward operation and maintenance while occupying minimal space. The system is ideal for small to medium-sized operations looking to produce adjustable, high-quality flour with reliable daily output.

Performance Metrics

Daily Processing Capacity

20 T/24h

Minimum Capacity

22 T/24h

Maximum Capacity

Extraction Rate (Standard Flour)

85 %

Technical Specifications

Total Power	59.9 KW
Voltage/Frequency	380V; 50HZ
Footprint (LxWxH)	18m x 7m x 5m
Tempering Tank Dimensions	3m x 3m x 3m (per tank)

Operational Details

Installation Options

- Self-installation allowed
- Technical guidance available upon request
- On-site technician and translator support (10 days)
- Operator training included during installation

Logistics

Shipping Requirements

1 x 20ft Container

Payment Terms	50% advance, 50% before shipping
Delivery Lead Time	30 days after advance payment
