

Compact Fluorescent Light Bulb

This compact fluorescent light bulb features a standard screw base. It is designed to be energy-efficient, providing a bright light output while consuming less power than traditional incandescent bulbs.

Overview

Energy-Efficient Lighting Solution

This compact fluorescent light bulb (CFL) is engineered for general-purpose lighting applications, offering a perfect balance of brightness and energy efficiency. Its design features a spiral tube structure that maximizes light output while consuming significantly less power than traditional incandescent alternatives. Designed with a standard screw base, it ensures easy installation into a wide range of existing fixtures for both residential and commercial use.

Technical Specifications

Bulb Type	Compact Fluorescent Light (CFL)
Base Type	Standard Screw Base
Design Features	Spiral tube design, Spherical bottom, Compact size

Performance

Key Benefits

- Energy-efficient operation
- High brightness output
- Low power consumption
- Versatile application
