

Compact Hydraulic Excavator

This compact hydraulic excavator is designed for digging, trenching, and material handling in construction and landscaping applications. It features a robust boom and arm, a digging bucket, and a blade for leveling.

Overview

Compact Hydraulic Excavator

This compact hydraulic excavator is engineered for precision digging, trenching, and material handling tasks in both construction and landscaping environments. It features a robust boom and arm assembly paired with a durable digging bucket and leveling blade, ensuring versatility on the job site. Designed for maneuverability, the unit utilizes a reliable track system and includes a fully enclosed cabin for operator comfort and safety.

Key Metrics

Key Features

- Robust boom and arm assembly
- Integrated leveling blade
- Fully enclosed operator cabin
- High-maneuverability track system

Applications

Construction, Landscaping, Trenching, Material Handling

Technical Specifications

Equipment Components

Component	Function
Digging Bucket	Excavation and material loading
Leveling Blade	Site grading and stabilization
Track System	Terrain mobility
