

Compact Maize Flour Mill

Complete maize processing line including cleaning, conditioning, degermination and grinding, suitable for coarse maize flour.

ADDITIONAL IMAGES

Overview

Compact Maize Processing Solution

This complete maize processing line is engineered for efficiency, integrating cleaning, conditioning, degermination, and grinding into a single, space-saving system. Designed specifically for the production of high-quality coarse maize flour, it minimizes footprint while maximizing output. The robust construction includes wear-resistant components to ensure long-term reliability and reduced maintenance needs for industrial operations.

Key Features

Core Processing Capabilities

- Integrated cleaning system
- Advanced conditioning stage
- Specialized degermination
- Precision grinding passage
- Aspiration for embryo reduction

Design Advantages

Compact Structure, Space Efficient, Wear-Resistant Sieve Plates, Optimized Embryo Removal

Certifications

Quality Standards

ISO 9001 • SGS Certified
