

Compact MIG/MAG Welding Machine, 230V

This compact MIG/MAG welding machine is designed for light to medium-duty welding applications. It operates on a 230V power supply and offers adjustable welding parameters for optimal performance.

Overview

Compact Welding Performance

The MARS 180 is a compact and portable MIG/MAG welding machine engineered for light to medium-duty welding tasks. Designed for versatility, it operates on a standard 230V power supply and provides adjustable welding parameters to ensure optimal performance across various materials. This unit is an excellent choice for professionals and DIY enthusiasts alike who require reliable, on-the-go welding capabilities.

Technical Specifications

Input Voltage	230 V
Frequency	50 Hz
Welding Process	MIG, MAG
