

Compact Multi-Function Construction Vehicle

This compact construction vehicle is designed for versatile operation in confined spaces. It features a robust hydraulic system for efficient lifting and loading, coupled with a durable chassis for stability and maneuverability.

Overview

Compact Multi-Function Construction Vehicle

This compact construction vehicle is engineered for high maneuverability in narrow spaces, making it an ideal choice for confined job sites. It features an open cabin design with an intuitive mechanical control system and double accelerograph controls for precise operation. Designed for versatility, this machine supports a wide range of attachments to handle various construction and landscaping tasks efficiently.

Operational Features

Key Design Features

- Compact structure
- Narrow space maneuverability
- Open cabin design
- Multi-function attachment compatibility

Control System

Mechanical control system with double accelerograph control
