

Compact Prefabricated Substation

This prefabricated substation is designed for efficient voltage transformation and reliable power distribution. It features a robust enclosure with integrated transformers, switchgear, and control systems, suitable for various applications.

Product Overview

Compact Prefabricated Substation

This compact prefabricated substation is engineered for reliable power distribution and efficient voltage transformation in urban and industrial environments. Featuring a robust, weather-resistant enclosure, the unit integrates switchgear, transformers, and control systems within a space-saving design. Built for long-term outdoor performance, it meets stringent safety standards while providing easy access for maintenance.

Technical Specifications

Integrated Systems

- High-voltage compartment
- Low-voltage compartment
- Power transformer
- Control and protection system

Typical Applications

Urban infrastructure, Industrial facilities, Commercial complexes, Outdoor power distribution

Compliance and Safety

Safety Compliance

High-voltage warning signs • Secure access doors • Weather-proof enclosure • Industry standard compliant
