

Compact PTC Ceramic Fan Heater

This compact fan heater is designed for personal space heating. It utilizes a ceramic heating element with positive temperature coefficient (PTC) technology and features an automatic shut-off function in case of overheating.

Product Overview

Efficient Personal Heating

This compact PTC ceramic fan heater is engineered for optimal performance in personal heating applications. Utilizing advanced Positive Temperature Coefficient technology, it ensures rapid and safe heat generation while maintaining energy efficiency. Its space-saving design, complemented by a sophisticated wood-grain finish and stable base, makes it an ideal choice for professional workspaces.

Technical Specifications

Safety Certification

PTC Technology • Safe Operation

Heating Technology

PTC Ceramic

Design Elements

Wood-grain finish, Black protective grill, Rotary control knob

Base Design

White stable mounting base
