

Compact Rice Combine Harvester

This compact rice combine harvester is designed for small-scale farming. It features a header with rotating reel and cutter bar for clean and effective harvesting, along with a threshing and separating system to efficiently separate grain from straw.

Product Overview

Compact Rice Harvesting Solution

This compact combine harvester is engineered specifically for small-scale farming operations that require high efficiency in confined spaces. The machine integrates advanced cutting, threshing, and cleaning technologies to ensure maximum grain purity and minimal loss. Designed for challenging terrains, its durable track system provides superior maneuverability in muddy paddy fields.

Technical Features

Capabilities

- High grain purity cleaning system
- Durable track-based mobility
- Optimized for paddy fields
- Operator-friendly controls
- Ergonomic seating

Maneuverability

High Terrain Adaptability • Small-Space Optimized

Harvesting System

Rotating Reel, Reciprocating Cutter Bar, Threshing System, Separating System
