

Compact Urban Electric Vehicle

This compact vehicle is designed for urban mobility. It features a two-door configuration and alloy wheels, making it ideal for navigating city streets.

Overview

Compact Urban Electric Vehicle

This compact electric vehicle is specifically engineered for efficient urban mobility. Featuring a two-door configuration and a small form factor, it is optimized for navigating tight city streets and simplifying parking in congested areas. Its design balances efficiency with modern aesthetics, making it a practical and environmentally conscious solution for daily city commuting.
