

Compact Welding Power Machine

This is a compact and robust welding power machine designed for efficient and reliable welding operations. The unit features durable construction and a cooling system, making it suitable for various welding applications and ensuring optimal performance.

Product Overview

Compact Welding Power Machine

This robust welding power machine is designed to deliver efficient and reliable performance for a variety of professional welding applications. Engineered for portability and durability, the unit features a compact construction that makes it an ideal solution for both on-site field work and workshop environments. It is powered by a 186F engine, ensuring consistent output and longevity for demanding operational requirements.

Performance Metrics

Power Output

1.8 KW

Rated Power

180 A

Rated Welding Current

Electrical Specifications

Electrical Parameters

Parameter	Value
Rated Voltage	230 V
Rated Frequency	50/60 Hz
Welding Empty Voltage	65 V (DC)

Technical Details

Engine Compatibility	186F Engine, Brushed Motor
