

Compact Wheel Loader

This compact wheel loader is a versatile construction machine for material handling. It features articulated steering for maneuverability and a robust hydraulic system for efficient lifting.

Overview

Versatile Compact Loader

The ZL12 is a high-performance compact wheel loader engineered for maximum efficiency in material handling. Designed with a robust hydraulic system and a powerful, fuel-efficient engine, it excels in diverse working environments ranging from urban construction sites to agricultural operations. Its articulated steering mechanism ensures superior maneuverability, allowing operators to navigate tight spaces with precision and ease.

Performance

Operational Metrics

12 Class

Model Series

Key Features

Articulated Steering, Robust Hydraulic System, Fuel Efficient, Compact Design

Technical Specifications

Application Areas

- Urban construction
- Agricultural material handling
- General site excavation

Terrain Compatibility

Diverse Terrains • Tight Urban Spaces
