

Composite Three-Blade Propeller for Ventilation

High-efficiency three-blade propeller designed for optimal airflow and ventilation. Constructed from durable composite material for long-lasting performance.

Product Overview

High-Efficiency Ventilation Solution

This three-blade propeller is engineered for optimal airflow and ventilation performance. Constructed from durable composite materials, it is built for long-lasting reliability in demanding environments. The precision-engineered blade geometry ensures quiet operation while maintaining maximum thrust for effective air movement.

Technical Specifications

| | |
|---------------------|---|
| Blade Configuration | Three-blade design |
| Material | Durable composite |
| Key Features | Quiet Operation, Balanced Rotation, High-Efficiency |

Applications

Suitable Applications

- Exhaust fans
- Ventilation systems
- Marine propulsion
