

Comprehensive Water Purification System

This comprehensive system includes a raw water tank, multiple filters, a reverse osmosis device, and an oxidation tower. It is designed for efficient water purification and processing.

System Overview

Professional Water Purification Solution

This comprehensive water treatment system is engineered for high-efficiency purification and processing. It integrates multiple stages including raw water storage, multi-medium filtration, active carbon treatment, and ion exchange. The system is capped with advanced reverse osmosis and oxidation technology to ensure high water quality standards for industrial or commercial use.

System Components

Equipment Modules

- Raw Water Tank
- Multiple Medium Filter
- Active Carbon Filter
- Sodium-Exchanger
- Reverse Osmosis Device
- Oxidation Tower

Certifications & Compliance

System Capabilities

Water Purification, Reverse Osmosis, Multi-stage Filtration, Ion Exchange
