

# Compressed Air Line Filter

This line filter is designed for compressed air systems, effectively removing contaminants like particulate matter and oil aerosols. It protects downstream equipment and processes by ensuring the delivery of clean, high-quality air.

## ADDITIONAL IMAGES

## Overview

### High-Efficiency Compressed Air Filtration

This compressed air line filter is engineered to deliver clean, high-quality air essential for the longevity and performance of pneumatic equipment. By effectively removing solid particles, oil aerosols, and water contaminants, it protects downstream processes from dirt, rust, and scale. Designed for durability and ease of maintenance, this unit features a robust housing and high-capacity filtration media to ensure optimal system efficiency.

## Key Features

### Maintenance Features

- Differential pressure indicator
- Manual or automatic condensate drain
- Easy-to-replace filter element

### Contaminants Removed

Solid Particles, Oil Aerosols, Dirt, Rust, Scale, Water

## Construction & Materials

### Housing Construction

Powder-coated Aluminum • Carbon Steel

## Applications

### Industrial Applications

- Air compressors
- Pneumatic tools
- Spray painting systems
- Instrumentation air
