

Compressor Component with Tubing and Mounting Brackets

This component is used in refrigeration and ventilation systems, often within a compressor. It includes a metallic frame with tubing for coolant circulation and mounting brackets.

Product Overview

Professional Compressor Component

This high-quality refrigeration and ventilation compressor assembly is designed for reliable integration into industrial climate control systems. It features a robust metallic frame integrated with precision-bent refrigerant tubing and reinforced mounting brackets. This component facilitates efficient coolant circulation and provides a stable, secure interface for central compressor hardware.

Technical Specifications

Key Assembly Features

- Integrated tubing for fluid circulation
- Reinforced mounting brackets
- Modular central block hardware
- Metallic structural frame

Component Status

Industrial Grade • Precision Engineered

Primary Application

Refrigeration, Ventilation, Compressor Systems
