

Compressor Connecting Rod Assembly

This compressor component features a green composite rod body with white, ribbed end caps. The design indicates it is for reciprocating motion applications within a compressor system.

Product Overview

Precision Compressor Component

The Compressor Connecting Rod Assembly is a critical sub-assembly designed for reciprocating motion applications within compressor systems. Featuring a durable green-colored rod body paired with ribbed white end caps, this component is engineered for reliable performance as a replacement part. Its specialized design ensures compatibility and efficient operation within larger compressor units.

Technical Specifications

Component Type	Connecting Rod Assembly
Application	Reciprocating compressor systems

Design Features

Design Characteristics

- Green-colored rod body
- White ribbed end caps
- Reciprocating motion design

Construction Materials	Composite Rod Body, Coated Material, Plastic End Caps
