

Compressor Cylinder Liners for Refrigeration and Ventilation

Cylinder liners designed for refrigeration and ventilation compressors. They provide optimal sealing and heat dissipation and are available in various sizes and materials.

Product Overview

High-Performance Cylinder Liners

These high-performance cylinder liners are engineered specifically for refrigeration and ventilation compressors. Built to exacting tolerances, they ensure optimal sealing and efficient heat dissipation during operation. Their durable construction promotes an extended service life across a wide range of industrial compressor models, making them a reliable choice for professional maintenance and assembly.

Technical Specifications

Customization

- Various sizes available
- Multiple material options for specific applications

Key Performance Attributes

High Tolerance • Durable Construction • Optimal Sealing • Heat Dissipation

Application Fields

Refrigeration Compressors, Ventilation Compressors
