

Compressor Vibration Isolation Pads

These square mounting pads reduce vibration and noise for refrigeration and ventilation compressors. They are constructed from durable, resilient material and offer excellent load-bearing capacity.

Product Overview

Vibration Isolation Solutions

These high-performance square mounting pads are engineered to deliver superior vibration isolation and noise reduction for refrigeration and ventilation compressor units. Constructed from resilient, heavy-duty materials, they provide robust load-bearing support while effectively dampening mechanical vibrations. By minimizing noise transmission, these pads protect surrounding equipment and significantly extend the operational lifespan of your HVAC and industrial machinery systems.

Technical Specifications

Key Features

- Effective vibration dampening
- Noise transmission reduction
- High load-bearing capacity
- Wear-resistant material composition

Primary Applications

HVAC Systems, Refrigeration Units, Industrial Machinery, Ventilation Compressors

Form Factor

Square
