

# Computerized Flat Knitting Machine

This high-speed, computerized flat knitting machine produces a variety of knitted fabrics. It features multiple yarn carriers for complex patterns, electronic needle selection for precise stitch control, and a user-friendly interface.

## Product Overview

### Professional Knitting Efficiency

This computerized flat knitting machine is engineered for high-speed production within modern textile manufacturing environments. It features advanced electronic needle selection for precise stitch control and multiple yarn carriers to accommodate complex pattern requirements. Designed for reliability and user accessibility, the machine offers an intuitive interface to streamline programming and real-time production monitoring.

## Technical Features

Control System	Computerized digital interface
Needle Selection	Electronic precise control
Patterning Versatility	Complex patterns, Multiple yarn carriers

## Operational Metrics

### Key Operational Metrics

**1 High-Speed**
