

Computerized Industrial Sewing Machine

This industrial sewing machine is designed for specialized sewing tasks. It features a robust motor, a large flat work surface, a foot pedal control, a precision cutting mechanism, and an embedded computer system for advanced control and automation.

Overview

Advanced Industrial Sewing Solution

This computerized industrial sewing machine is engineered for high-precision, specialized sewing tasks in demanding manufacturing environments. Featuring an integrated embedded computer system, it offers advanced automation capabilities to streamline complex stitching operations. The unit includes a robust motor and a large, flat work surface, providing the stability and control required for professional-grade production.

Key Features

Control System

Embedded Computer • Automated Stitching • Precision Control

Core Components

- Robust Industrial Motor
- Large Flat Work Surface
- Precision Cutting Mechanism
- Foot Pedal Control
