

Computerized Knitting Machine for Textile Production

Advanced knitting machine designed for efficient textile production, featuring a computerized system for pattern control and automated operation. Suitable for manufacturing various textile products with precision and speed.

Product Overview

High-Efficiency Computerized Knitting

This advanced computerized knitting machine is engineered for high-speed textile production and precise pattern control. Featuring an automated operating system, it ensures consistent output quality for diverse textile manufacturing requirements. Designed for industrial efficiency, it combines reliable performance with sophisticated digital management to streamline the production process.

Technical Specifications

Core Features

- Computerized pattern control
- Automated production cycle
- High-precision output
- Industrial-grade construction

Control System	Computerized
Operation Mode	Automated
Primary Application	Textile Manufacturing, Glove Production
