

# Computerized Rotogravure Printer

This computer-controlled rotogravure printing machine is engineered for efficient, high-quality printing on flexible packaging. The system features advanced tension control, automatic registration, and a user-friendly interface.

## ADDITIONAL IMAGES

## Overview

### High-Precision Rotogravure Printing

This computer-controlled rotogravure printing machine is engineered for high-quality, efficient printing on a variety of flexible packaging materials. It utilizes an advanced automated system to maintain precise control over critical printing parameters such as ink viscosity, printing speed, and drying temperature. Designed for reliability and ease of maintenance, this machine ensures consistent print registration and superior performance across diverse industrial applications.

## Technical Capabilities

### Key Features

- Advanced tension control
- Automatic registration
- Computerized parameter control
- Integrated safety features
- User-friendly interface

### Supported Substrates

Plastic Films, Paper, Aluminum Foil

## Applications

### Industry Applications

Food Packaging • Pharmaceuticals • Cosmetics • Label Printing
