

# Concentric Pipe Reducer Fitting

This concentric reducer fitting is made of stainless steel. It connects pipes of different sizes in a pipeline system, ensuring minimal flow restriction.

## Product Overview

### Concentric Pipe Reducer Overview

The concentric pipe reducer is a precision-engineered fitting designed to join two pipes of different diameters in a coaxial alignment. Featuring a gradual, smooth transition, this component effectively minimizes flow turbulence and pressure drop within industrial pipeline systems. It is constructed from high-quality stainless steel, ensuring durability, corrosion resistance, and structural integrity for demanding B2B applications.

## Technical Specifications

### Component Type

Concentric Reducer • Pipe Fitting

### Connection Method

Threaded

### Material Grade

Stainless Steel
