

Concrete Batching Machine

This concrete batching machine accurately measures and dispenses components for concrete mixes. It features multiple hoppers for aggregates and cement, arranged above a central discharge point and supported by a steel frame.

Product Overview

Professional Concrete Batching Solution

This concrete batching machine is engineered for high-precision construction projects, designed to accurately measure and dispense essential concrete components. Featuring a robust steel frame and multiple integrated hoppers, it ensures consistent material proportioning for sand, gravel, and cement. This equipment is an essential asset for construction sites requiring efficient, reliable, and high-quality concrete production.

Technical Specifications

Equipment Type	Concrete Batcher
Frame Material	Robust Steel
Key Features	High-Precision Weighing, Multi-Hopper System, Industrial Grade, Accurate Proportioning

Operational Capabilities

Hopper Setup

- Aggregate Hopper (Sand)
- Aggregate Hopper (Gravel)
- Cement Hopper

Measurement System	Yes
