

Concrete Batching Plant

The overall modular design makes installation and transfer quicker and easier. This plant efficiently mixes dry, semi-dry, and plastic concrete, accommodating various matching requirements.

Product Overview

High-Efficiency Concrete Production

The HZS90T is a stationary concrete mixing plant designed for efficient and reliable concrete production in medium to large-scale construction projects. Its modular design facilitates easy installation and relocation, while the robust steel structure ensures durability and long-term performance. Equipped with a twin-shaft mixer and advanced weighing systems, it delivers high output and consistent concrete quality for diverse applications like buildings, bridges, and infrastructure development.

Performance Specifications

Production Capacity

90 m³/h

Hourly Output

Technical Features

Mixer Type	Twin-shaft mixer
Design Features	Modular Design, Stationary, Automated Control

System Components

Core Components

- Aggregate storage silos
- Cement silos
- Belt conveyor system
- Weighing system
- Enclosed control room

Applications

Suitable Projects

Infrastructure • Bridge Construction • Large-scale Buildings
