

Concrete Cutter with Wheeled Frame

This concrete cutter is equipped with a robust engine and a circular cutting blade. It features a sturdy frame with wheels for enhanced mobility on construction sites.

Overview

Professional Concrete Cutting Solution

This robust concrete cutter is engineered for high-performance cutting in demanding construction environments. Featuring a sturdy wheeled frame for enhanced mobility and a powerful engine, it is designed to handle tough materials like concrete and asphalt with precision. Its ergonomic design and reliable construction make it an essential tool for road repair, demolition, and infrastructure projects.

Key Features

Model Designation

HQ160

Primary Applications

Road Construction, Asphalt Cutting, Concrete Demolition, Infrastructure Repair

Technical Specifications

Mobility System

Wheeled frame with maneuvering handle

Cutting Mechanism

Circular cutting blade with safety guard

Design Type

Self-propelled
