

Concrete Finishing Power Trowel

This power trowel is designed for finishing concrete surfaces to a smooth and level finish. It features intuitive controls and safety features, ensuring efficient and reliable performance on various construction sites.

Overview

High-Efficiency Ride-On Concrete Finishing

This ride-on power trowel is designed to significantly reduce labor intensity while delivering superior compaction and road surface density. By utilizing a dual-cutter system, it achieves construction efficiency 5-8 times higher than traditional handheld machines. It is an ideal solution for large-scale projects like warehouses and factories where a smooth, professional level finish is required.

Core Features

Key Benefits

- Ride-on design for reduced operator fatigue
- Mechanical steering system for quick response and flexibility
- Dual lifting discs for rapid cement slurry extraction
- Integrated LED lighting for low-light operation
- Adjustable blades for customized surface texture

Engine & Power

Engine Type

World Famous Brand • Honda Powered

Power Performance

Strong and reliable power output for continuous heavy-duty construction

Operation & Control

Steering Control	Mechanical steering with dual multi-directional joysticks
Operator Ergonomics	Centrally located seat for enhanced visibility and intuitive control access

Safety & Construction

Safety Equipment	Safety Cage, Emergency Shut-off, Protective Frame
Frame Construction	Robust heavy-duty frame designed for industrial use
