

Concrete Mixer Bucket Attachment

This concrete mixing bucket allows operators to efficiently load, mix, transport, and discharge concrete. Its compact size, combined with a skid steer loader or excavator, makes it suitable for pouring sidewalks, driveways, and small building floors in limited access locations.

Product Overview

Efficient On-Site Concrete Production

This concrete mixing bucket attachment is designed to optimize heavy machinery utility by enabling on-site concrete manufacturing. It combines the functions of an agitator and a bucket, significantly reducing manual labor and streamlining the mixing process. Engineered for durability and high performance, it ensures consistent material homogenization and precise discharge control for construction projects.

Construction & Materials

Safety Features

- Fixed safety rounded grill
- Integrated bag breaker
- Hydraulic bottom opening cylinder with covered rod

Key Materials

Wear-resistant Steel Q345b

Technical Features

Operational Capabilities

- Positive and negative auger rotation
- Adjustable picker with long round hole design
- Controlled side discharge mechanism
- Optional splash-prevention cover plate

Included Hydraulic Components

Electric Valve • Hydraulic Hoses • Electric Connection Kit • Flat Face Couplings

Mixing Performance

1 Bidirectional

Auger Rotation
