

Concrete Mixer Pump Truck

This mixing integrated pump truck combines concrete mixing and pumping functions for high efficiency. The multi-section boom allows flexible concrete placement at various heights and distances.

ADDITIONAL IMAGES

Overview

Innovative Mixing and Pumping Solution

This Concrete Mixer Pump Truck represents a significant advancement in construction efficiency by integrating mixing and pumping functions into a single, mobile unit. Featuring China's first trackless hydraulic lifting hopper, it eliminates the need for complex installation and disassembly, allowing for rapid deployment and transfer. The system is designed for ease of use with remote control operation, ensuring a safer, more convenient, and highly efficient construction process.

Key Features

Technological Advantages

- Trackless hydraulic lifting hopper
- Awarded multiple national invention patents
- No installation or disassembly required
- Fast transfer speed between sites
- Remote control operation for simple, user-friendly handling

Operational Benefits

Safe, Convenient, Time-saving, Efficient, Easy to learn

Technical Specifications

Core Functions

Concrete Mixing • Concrete Pumping

Key Components

- Robust chassis
- High-capacity mixing drum
- Multi-section boom
- High-pressure concrete pump
- Advanced hydraulic system

Applications

Typical Applications

- Building foundations
- Bridge construction
- Road construction
- Infrastructure development
