

Concrete Mixer Replacement Parts

These components typically include the mixing drum, wheel system, and mixing mechanism. Also included are the charging, discharge, and pumping systems.

Overview

Concrete Mixer Replacement Parts

These replacement parts are essential for maintaining the operational efficiency of concrete mixing equipment. The system components include the mixing drum, drive wheels, and specialized mixing, charging, discharge, and pumping systems. Designed for durability and performance, these parts ensure consistent concrete and mortar preparation for large-scale construction projects.

System Components

Drum Material Options

- Stainless Steel
- Lightweight Plastic

Mixing System Configuration

Twin-shaft, Single-shaft, Vertical-shaft, Horizontal

Pumping System

Hydraulic system

Maintenance & Hardware

Hardware Accessories

- Nuts
- Bolts
- Iron accessories

Performance Metrics

Primary Functions

Concrete Mixing • Material Storage • Concrete Transport • Discharge Connection
