

Concrete Mixer Truck

This concrete mixer truck transports and mixes concrete over long distances. The rotating drum keeps the material moving to prevent solidification.

Overview

Professional Concrete Mixing and Transport

This robust concrete mixer truck is engineered for the efficient transport and continuous mixing of concrete over long distances. Featuring a specialized rotating drum system, it ensures material consistency and prevents solidification during transit. Designed with a lower center of gravity, the unit offers enhanced stability and safety, making it a reliable choice for high-volume construction projects.

Key Features

Operational Advantages

- Continuous drum rotation for consistent material quality
- High-capacity loading for economical transport
- Lower center of gravity for improved stability
- Reduced overall unit height for safer transit
- Dual functionality: transport and mixing

Application Types

Concrete Transport, Concrete Mixing, Boom Pump Integration

Performance Metrics

Performance Capabilities

20 floors

Max Building Floors (with boom pump)
