

Concrete Power Trowel Machine

This machine is used to extract slurry and compact the concrete surface. It is also suitable for smoothing and polishing concrete.

Overview

High-Efficiency Ride-On Concrete Finishing

This heavy-duty ride-on power trowel is engineered for finishing large-scale concrete slabs with precision and speed. Featuring a dual-lever control system and a comfortable rider seat, it allows operators to achieve a smooth, level finish over extensive areas with minimal effort. The robust steel frame and integrated safety cage ensure durability and operator protection in demanding construction environments.

Operator Station

Design & Construction

Frame Construction	Robust steel frame with durable yellow body coating
Safety Systems	Safety Cage, Dual Lever Control, Integrated Lighting

Operation

Operation Type

Ride-On • Manual Lever Steering

Primary Applications

- Large concrete slabs
- Industrial flooring
- Surface smoothing
- Level finishing

Technical Components

Mechanical Components

Component	Description
Engine	Internal combustion engine for high-torque operation
Blade System	Rotating multi-blade system for finishing
Visibility	Integrated lighting for low-light environments
Ergonomics	Adjustable operator seat
