

Concrete Pump Truck

This concrete pump truck is designed for efficient and reliable concrete placement on construction sites. It features a multi-section boom for extended reach and maneuverability and a robust pumping system for high-volume output.

Overview

High-Performance Concrete Placement

This concrete pump truck is engineered for efficient and reliable concrete placement across demanding construction sites. It features a multi-section boom system designed for extended reach and superior maneuverability in tight spaces. With a robust pumping mechanism and a high-volume output capacity, this unit ensures consistent performance, while the durable chassis provides essential stability during transport and operation.

Technical Specifications

Equipment Type

Concrete Pump Truck • Mixer Pump

Model Designation

SY5332THB 48

Boom Reach Designation

ZJ-48-41

Key Features

Key Operational Features

- Multi-section boom for extended reach
- High-volume pumping system
- Advanced control system for precision
- Integrated operator safety features
- Heavy-duty chassis for stability
