

Concrete Pump Truck for Construction

This high-performance concrete pump truck is designed for efficient and reliable concrete placement on construction sites. It features a multi-section boom for extended reach and maneuverability, allowing precise concrete delivery to various locations.

Overview

High-Performance Concrete Placement

This concrete pump truck is engineered for efficient and reliable concrete delivery on demanding construction sites. Featuring a multi-section boom, it offers exceptional reach and maneuverability for precise placement in complex environments. The integrated high-volume pumping system ensures consistent output, while the robust chassis and advanced hydraulics provide superior stability during operation.

Technical Specifications

Model Number	S-802
Series	STRATHOS
Equipment Code	A-3-42

Application

Suitable For	Large-scale Construction, Infrastructure Development, High-rise Buildings
--------------	---

Key Features

Performance Highlights

- Multi-section boom for extended reach
- High-volume pumping capacity
- Advanced hydraulic stabilization system
- Robust chassis for heavy-duty operation
