

Concrete Vibration Ruler

This concrete vibration ruler offers fast and efficient concrete surface leveling. It is designed to eliminate air pockets and cracks, ensuring a solid and uniform concrete floor.

Product Overview

Professional Concrete Finishing Solution

This walking-type concrete vibration ruler is designed to efficiently level and smooth concrete surfaces, significantly reducing labor requirements compared to manual scraping. By effectively removing air pockets and increasing concrete density, it helps prevent common issues like cracks and drums. The machine features a lightweight, durable design with an adjustable handle and interchangeable blade, making it a versatile tool for professional pavement engineering and concrete floor construction.

Technical Specifications

Blade Length Range	1-3 meters
Blade Material	Aluminum Alloy
Operation Type	Walking-type
Power Source	Gasoline

Key Features

Key Performance Features

- Manual throttle control for adjustable vibration frequency
- Adjustable handle height for operator comfort
- Easy blade replacement system
- Lightweight and portable design

Operational Benefits	High Flatness, Crack Reduction, Increased Density, Labor Saving
