Product Overview

High-Performance Conical Rotary Mining Pick

This conical rotary mining pick is engineered for high-efficiency rock and soil excavation in demanding underground environments. Featuring a robust construction with a hardened alloy steel body and a wear-resistant conical tip, it provides exceptional durability and effective material fracturing. Designed for compatibility with continuous miners and longwall shearers, this tool ensures optimal penetration and prolonged service life for heavy-duty drilling applications.

Technical Specifications

Equipment Compatibility

- Continuous Miners
- Longwall Shearer

Key Design Features

Conical Head, Hardened Tip, Cylindrical Shank, Wear-Resistant, High-Strength Alloy

Model Identifier

CU30414

Application

Suitable Applications

Rock Excavation • Soil Excavation • Drilling • Material Fracturing
