

Constant Coverage Horn Flare for Audio Systems

This constant coverage horn flare is designed for professional audio systems. It provides precise directional control and consistent sound dispersion, ensuring optimal audio quality in various acoustic environments.

Overview

Professional Acoustic Engineering

This high-performance constant coverage horn flare is precision-engineered for professional audio applications. It offers exceptional directional control and consistent sound dispersion to maintain audio integrity across diverse environments. Built from durable materials, it provides the reliability needed for demanding sound reinforcement systems.

Performance

Key Technical Benefits

- Constant coverage dispersion pattern
- Minimized acoustic distortion
- Optimized efficiency for high output
- High-durability construction

Operational Status

Professional Grade • Long-lasting

Suitable Applications

Line Array Systems, Stage Monitors, Professional Sound Reinforcement
