

Construction Machinery Pressure Sensor

This pressure sensor is designed for use in construction machinery. It measures pressure in hydraulic and pneumatic systems, providing critical data for control and monitoring.

Overview

High-Precision Pressure Sensing

This pressure sensor is engineered specifically for demanding construction machinery environments, providing reliable hydraulic and pneumatic pressure monitoring. Built with a robust stainless steel body, it ensures durability and consistent performance under harsh operating conditions. It delivers critical data for optimal system control and is compatible with standard three-pin electrical connections.

Technical Specifications

Application	Construction Machinery
Connector Configuration	3-pin electrical connector
Material	Stainless Steel
Mounting	Threaded connection

Compatibility

Compatible Machinery

- Kobelco
