Product Overview

Professional Construction Material Hoist

This construction material hoist is a specialized vertical lifting solution designed for high-rise building projects, industrial facilities, and infrastructure development. Engineered for efficiency and reliability, it facilitates the safe transport of both materials and personnel across various levels of a structure. With over two decades of manufacturing expertise, this equipment is built to meet the rigorous demands of modern construction sites.

Technical Capacity

Annual Production Capacity

5000 units

Construction Hoists

4000 units

Tower Cranes

Manufacturing Bases

3

Application Areas

Primary Applications

Residential Construction, Roads and Bridges, Industrial Facilities, Power Engineering

Safety & Features

Integrated Safety Systems

- Overload protection
- Emergency brakes
- Safety interlocks
- Enclosed cage structure
